

Need Farming!

NEED Farming is a farming management concept based on observing, measuring and responding to variability in crops, based on the needs of every single plant.

To make the next step in agriculture we **NEED** care on plant level. Back to the basics of farming with the latest technologies, taking care of every individual plant instead of inter and intra-field variability. Taking care of every plants its own **NEEDS** instead of the **NEEDS** of a whole field.

1. Knowledge of the farmer combined with information about soil and the plant

2. Guarantee that every drop hits the right spot - **StrictSprayPlus**

3. We need to give every plant its own specific need in dosage and amount - **DynamicDosePlus**

Knowledge of the farmer

Get advised!

1. Measure of crop and soil 
2. Analyze data (data knowledge) 
3. Interpretation of data (ag knowledge) 
4. Taskmap creation 

StrictSprayPlus

Always the right application

1. Sections per nozzle 
2. Curve correction 
3. Speed correction
